Discharge Summary

Name : Baby Of Rajeni S Age/Gender : 6 Days/Female UHID : 300060857 IP No.: 15/14101

Address : TYPE-II H 89/6 PERIYAR VIHAR AMBALAPPADY NAD P O ALUVA, KOCHI, KERALA, INDIA

Consultant : Dr. GEORGE JOSE

DOA : 15/12/2015

DOD : 21/12/2015

DIAGNOSIS : Communicating hydrocephalus / Neonatal Hyperbilirubinemia/term AGA

HISTORY : Single live term female baby born to 36 yr old G2L1 mother by LSCS at 36+ weeks gestation with Birth weight: 2.68 kg at 4.23 pm on 15/12/15.

APGAR: 8, 9, 10 at 1, 5 and 10 min

Antenatal issues: NIL

Problems

1. Antenatally detected hydrocephalus- Baby was shifted to NICU in view of antenatally diagnosed hydrocephalus. Neurosurgery consultation was taken. Neurosonogram suggested - moderate hydrocephalus. MRI done showed Communicating hydrocephalus, probably secondary to old sub arachnoid / subdural bleeds with superficial siderosis causing CSF loculations. neurosurgery reference was sought, no active interventions needed now, however plan is to monitor head growth at regular intervals as advised. neurodurgery follow up at 3 months of age

2. Hyperbilirubinemia- Kept under phototherapy on day 2 of life for a day. Repeat Billirubin values showed a declining trend
